Bluelight Gazetteer Management System

Drive efficiency and better manage your address data with our advanced Gazetteer Management System (GMS).

Emergency services face considerable challenges in maintaining and sharing accurate address data:

2.7M address changes in Great Britain every six weeks.

Manual address updates are time-consuming, inefficient and vulnerable to human error.

Emergency response times are hampered if address data is inaccurate, incomplete or non-existent.

Local data on **crime or fire risk locations may not exist** on national datasets.

Multiple systems need to be integrated, e.g. command and control and the mobilising system, for efficient deployment to precise locations.

Persistent budget cuts mean emergency services have to manage lean resources.

Transformative, feature-rich gazetteer software

Used by over half the emergency services in Great Britain, our advanced **Bluelight GMS** on the Aligned Assets platform, enables you to maintain and enhance your address data to the British Standard BS7666.

Designed for comprehensive gazetteer management, our GMS provides a single source of the most up-to-date address data available, AddressBase Premium, complete with Unique Property Reference Numbers (UPRN) and Unique Street Reference Numbers (USRN) for linking disparate datasets.

Driving efficiency with our Bluelight GMS

Ensure consistency across the entire emergency service through **seamless integration** with your operational systems, such as command and control and your mobilising system.

Enable rapid searches on historic and live records by searching the entire property life cycle, ensuring quick deployment to the correct address.

Deploy crews faster by **creating local properties and streets** that do not exist in AddressBase Premium, in the British Standard BS7666, complete with UPRNs and USRNs.

Take local records from your legacy systems and create them in your single source GMS in AddressBase Premium format to **ensure consistency and quick retrieval.**

Enhance existing addresses by creating local only data, e.g. alternative names, enabling faster deployment.

View and interrogate addresses with a local–only layer and/or an AddressBase Premium layer, providing only the data you want to see.

Automate Change Only Updates (COU) to maintain accuracy and consistency efficiently.

Reduce infrastructure and maintenance costs with a hosted solution that enhances resilience and agility.

We are continually developing our Bluelight GMS to ensure compatability with changes in technology and data standards, such as the forthcoming Emergency Services Gazetteer and the National Geographic Database.

Going beyond gazetteer management

Our GMS seamlessly integrates with our complementary software products, elevating your address data solutions with features such as matching and cleansing, incorporating non-British Standard BS7666 data to be stored alongside existing addresses, and harnessing robust APIs for rapid, accurate address lookups.

"Unlike our previous gazetteer, Idox's Bluelight GMS has enabled integration with other systems, such as our premise risk management system, ensuring all our systems have access to a single accurate, set of address data. From an analytical perspective, using a single address through multiple systems allows analysis to be more efficient and reliable."

Matthew Ella
Gazetteer & GIS Technician, Buckinghamshire FRS
