

Idox. Do more.

A dedicated solution for tracking Bodyguard™ T syringe pumps inside and outside the hospital

Bodyguard™ T lockbox solution

Empowering healthcare staff with the ability to locate, manage and use medical equipment more efficiently.

19%

worth of Bodyguard™ T pumps are unaccounted for at any given time

£6.2m

approximate average annual monetary loss

<25 secs

reduce the time to find highly critical medical equipment to less than 25 seconds

£250k

opportunity for trusts to save up to £250K annually by implementing an asset tracking system

Our comprehensive iAssets solution enables the NHS to track and manage trust assets across all healthcare settings in hospitals and the community. We currently work with 30 major trusts in the UK.

The BodyGuard™ T (formerly known as T34™) syringe pumps are used throughout the NHS, in hospitals, homes and the community. This highly portable device is suitable for both inpatient and outpatient care. Valuable time and money are wasted searching for and retrieving devices that have moved throughout the hospital, or lost within the community when they are loaned to patients at home and never returned.

At present, trusts use lockboxes to protect these products and prevent tampering, unfortunately, they cannot be tracked outside the hospital environment. By tagging these devices with Wi-Fi and GPS technology, trusts benefit from an enhanced and practical tracking solution for their entire healthcare estate, saving the NHS millions of pounds in losses and improving patient care.

Save NHS funds with the smart, safe and cost-effective way to track and keep Bodyguard™ T

We consulted with a panel of EBME managers across NHS trusts to redesign the Bodyguard™ T specifically around their asset tracking needs.

Save NHS funds

Minimise losses of expensive Bodyguard™ T and enable EBME departments to take control of medical device tracking.

Improved maintenance schedules

Enable EBME equipment to be tracked and serviced to MHRA standards at all times.

Tags inside

No need to attach a tag to the outside of a lockbox – which gets lost. Tag the device, not the accessory.

Perfect fit

Intricate, secure mouldings to fit the unique BodyGuard™ T syringe driver shape.

Powerful software

iAssets software gives EBME managers more control and visibility of device locations at all times.

Improved budget control

More device availability

Improved staff productivity

Drives efficiency

Supports clinical safety
